Financialization of Commodities

"Since the early 2000s, commodity futures have emerged as a popular asset class for many financial institutions. According to a staff report from the U.S. Commodity Futures Trading Commission (CFTC 2008), the total value of various commodity index-related instruments purchased by institutional investors increased from an estimated **\$15 billion** in 2003 to at least **\$200 billion** in mid-2008..."

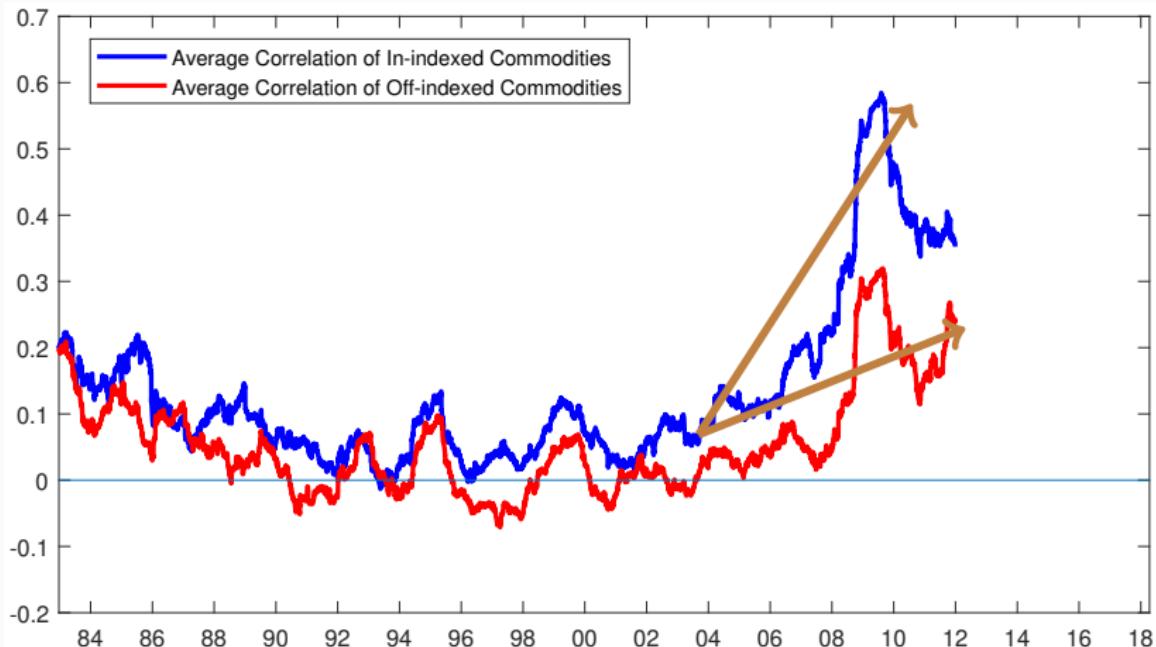

— *Tang and Xiong (FAJ, 2012)*,

Summary of Results

- Propagation of non-fundamental shocks among indexed commodities
 - “Connected” index sentiment is **positively** related to **contemporaneous return**, but **negatively** predicts **return tomorrow** for indexed commodities (but not for non-indexed commodities).
- Propagation of sentiment is much stronger during periods when the index is more exposed to institutional trading (or indexing).
- Causality is from commodity index trading to excessive comovement in the commodity index.

Literature

- Commodity Financialization:

- Tang and Xiong (FAJ, 2012) | Tang and Zhu (RFS, 2016) | Basak et al (JF, 2016) | Cheng and Xiong (ARFE, 2014) | Goldstein and Yang (WP, 2017) | Brogaard et al (RFS, 2018), etc.

- Commodity Financialization:

- Tang and Xiong (FAJ, 2012) | Tang and Zhu (RFS, 2016) | Basak et al (JF, 2016) | Cheng and Xiong (ARFE, 2014) | Goldstein and Yang (WP, 2017) | Brogaard et al (RFS, 2018), etc.

- *"The trading of index traders can inject both fundamental information and unrelated noise into the futures prices. Therefore, market efficiency can either increase or decrease with financialization."*

— Goldstein and Yang (WP, 2017)

- *"Direct tests of price impacts and impacts on correlations should incorporate clear identification strategies."*

— Cheng and Xiong (ARFE, 2014)

Literature

- Side effect of indexing
 - amplification of fundamental shocks (Hong et al., 2014) | non-fundamental price changes (chen et al., 2004) | excessive comovement (Barberis et al., 2005; Greenwood, 2005, 2008; Da and Shive, 2018; Baltussen el al., 2019) | deterioration of the firms information environment (Israeli et al., 2017) | increased non-fundamental volatility in individual stocks (Ben-David et al., 2017) | reduced welfare of retail investors (Bond and Garcia, 2017).
 - Similar effects can exist in the commodity market

Data & Variable Construction

Commodities & Commodities Index

- Commodity Futures Contracts: Pinnacle Corp.
 1. Nearest-to-maturity (front-month) contract: $F_i(t, T_1)$;
 2. Next-to-maturity contract: $F_i(t, T_2)$.
- Returns:

$$r_{it} = \frac{F_i(t, T_1) - F_i(t-1, T_1)}{F_i(t-1, T_1)}.$$

- Log Basis:

$$Basis_{it} = \frac{\ln(F_i(t, T_1)) - \ln(F_i(t, T_2))}{T_2 - T_1}.$$

- Amihud (2002) Illiquidity:

$$Illiquidity_{it} = \frac{|r_{it}|}{\$ \text{ of Volume}_{it}}.$$

- Commodity Indices:
 1. GSCI and BCOM: Yahoo finance;
 2. NIDX: equal-weighted portfolio of off-index commodities.

Commodities Index Exposure

- CFTC Commitment of Traders (CoT) Report and Supplemental Commitment of Index Traders (CIT) Report
- Open Interest:

$$2(\text{Open Interest}^{\text{All}}) = \underbrace{(\text{Long} + \text{Short} + 2\text{Spread})}_{\text{Non-commercial}} + \underbrace{(\text{Long} + \text{Short})}_{\text{Commercial}}$$
$$+ \underbrace{(\text{Long} + \text{Short})}_{\text{Index Trading}} + \underbrace{(\text{Long} + \text{Short})}_{\text{Non-reportable}}$$
$$\text{Open Interest}^{\text{Idx}} = \underbrace{(\text{Long} + \text{Short})}_{\text{Index Trading}} / 2$$

- Index Exposure:

$$\text{Indexing}_t = \frac{\sum_i \text{Open Interest}_{iw(t)}^{\text{Idx}} \times \text{Contract Size}_i \times \text{Price}_{it}}{\sum_i \text{Open Interest}_{iw(t)}^{\text{All}} \times \text{Contract Size}_i \times \text{Price}_{it}}.$$

Commodities News Sentiment

- Thomson Reuters News Analytics: 3 tones (positive, negative, neutral)
- Net News Tone: *positive – negative*
- Abnormal Net News Tone: Residuals after regressing net news tone on month dummy and first lag.
- **News Sentiment:** orthogonalize tones on fundamentals

$$Abn. \ Net \ Tone_t = \alpha + \beta' \begin{bmatrix} r_t \\ r_{t-1} \end{bmatrix} + \theta' \begin{bmatrix} Basis_t \\ Basis_{t-1} \end{bmatrix} + \phi' \begin{bmatrix} Illiquidity_t \\ Illiquidity_{t-1} \end{bmatrix} + \epsilon_t.$$

$\hat{\epsilon}_t \rightarrow$ Non-fundamental Shock / "News Sentiment".

- **"Connected" Sentiment:**

$$Cnn. \ Sentiment_{it} = \sum_{S(j) \neq S(i)} W_{jy(t)} Sentiment_{jt}.$$
